Usability

Extensions & Custom Apps for ThingWorx Navigate

SF EXTENSIONS for ThingWorx Navigate makes product information from various systems available for everyone who needs it for the daily work.
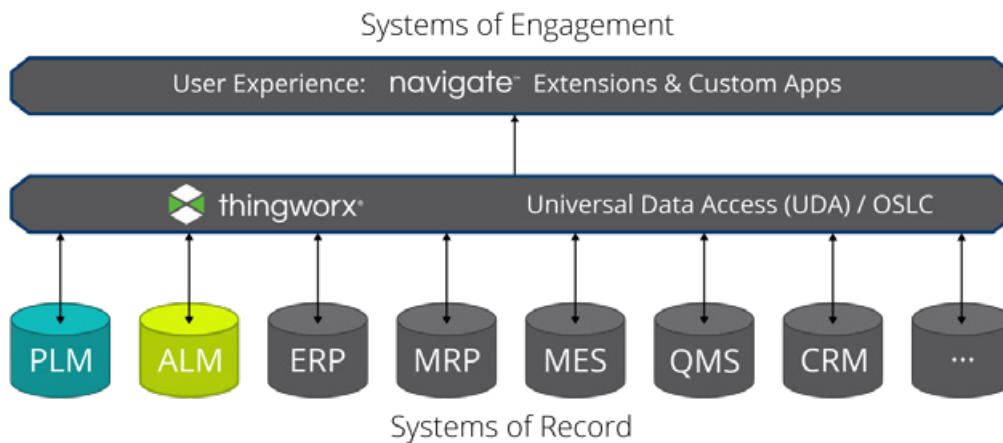

Extensions & Custom Apps for ThingWorx Navigate

ThingWorx Navigate makes product information from various systems available for everyone who needs it for their daily work. By default, ThingWorx Navigate includes standard integrations for PTC Windchill and allows access to further enterprise systems (Systems of Records) without coupling or synchronizing them.

That way, users all across the company gain easy, roll-based access to the information required for their daily tasks or work steps. This offers remarkable increases in both, productivity and efficiency, since none of the specialists loses time by searching or providing data.

Capabilities

- Rapid App Development (RAD) of user-orientated User Experience (UX) Design for the ThingWorx Navigate users
- Coupling of third-party systems based on UDA / OSLC and web services
- Extensions of PLM/ALM functions for PTC Windchill
- Conception, installation, configuration, operation and support of your PTC Navigate infrastructure
- Provision of SF Smart Standard Apps for PTC Navigate
- Hands-on training for ThingWorx Navigate, the development environment and ADK (Application Development Kit)

Summary

- **SF** Extensions for ThingWorx Navigate allow easy and fast data provision from various systems.
